

**THE BOMBAY TEXTILE RESEARCH ASSOCIATION**

**ORIENTATION PROGRAMME IN WET PROCESSING**  
**(QUALITY & PROCESS CONTROL)**

**[Reprint]**

This book describes in detail about the role of quality control and process control in wet processing. It is important to have control throughout the various stages of processing in order to ensure a fault-free finished material and this publication fill this requirement. The following topics are covered in this publication.

- ✓ Simple chemical methods for characterising commonly used synthetic fibres and filaments
- ✓ Identification and analysis of fibres and their blends
- ✓ Testing of dyes, chemicals and auxiliaries – fabric preparation, dyeing, printing and finishing
- ✓ Evaluation of sizing ingredients
- ✓ Testing of fuel and allied products
- ✓ Process control
- ✓ Quality control
- ✓ Computer aided colour matching – basic principles / practical applications
- ✓ Role of instrumentation in monitoring and control of chemical processing
- ✓ Sophisticated instrumental methods of analysis related to wet processing
- ✓ Wastewater management with special reference to wastewater recycle in textile industries
- ✓ Testing of textile effluents
- ✓ Investigational approach in analysing fabric defects in wet processing
- ✓ Manufacturing to specifications, institutional supplies and exports

The cost of this book is **Rs. 350/- per copy** including postal charges.

**Payment may be sent by Demand Draft in the name of 'The Bombay Textile Research Association' payable at Mumbai.**
